TASKMATE – INTEGRATION AND FINAL REVIEW

1. INTRODUCTION

Integration and final review are important stages of the TaskMate project. They ensure that all project components and documents are organized and ready for submission.

2. OBJECTIVES

- Combine the project files in one repository.
- Review all team members' contributions.
- Check the documentation for completeness.
- Ensure the project files are properly organized.
- Prepare the project for final submission.

3. PROJECT INTEGRATION

- Collect the files from all team members.
- Add the source code and prototype files to the GitHub repository.
- Include project documentation such as README.md.
- Organize design, testing, and requirements documents.
- Verify that the required files are available.

4. FINAL REVIEW

- Check the project introduction and objectives.
- Review the requirements and user stories.
- Verify the workflow diagram and wireframe.
- Review the prototype and source code.
- Check the testing results.

5. SUBMISSION CHECKLIST

- README.md completed.
- Requirements document added.
- Workflow diagram and wireframe included.
- Prototype or source files uploaded.
- Testing results documented.
- Team contributions recorded.
- All required files reviewed.

6. EXPECTED OUTCOME

A well-organized project repository containing the available source files, documentation, design materials, and testing results.

7. CONCLUSION

Final review and integration help ensure that the TaskMate project is organized, documented, and ready for submission.
