TASKMATE – TASK MANAGEMENT APP

1. PROJECT DESCRIPTION

TaskMate is a task management application designed to help users organize their tasks and manage their daily activities efficiently. It aims to make task tracking simple and convenient. The application helps users keep track of their work and monitor task completion.

2. OBJECTIVEs

- To help users organize their daily tasks.
- To make task tracking easier and more convenient.
- To help users monitor task completion.
- To improve productivity through better task organization.
- To provide a simple and user-friendly interface.
-

3. PROJECT SCOPE

The project focuses on organizing and tracking tasks through a simple user interface. It is intended to help users manage their daily activities and keep track of their work. The final scope depends on the features available in the current working model.

4. FEATURES

- Add new tasks, if implemented.
- View the list of tasks.
- Update task status, if implemented.
- Set deadlines for tasks, if implemented.
- View task information through the application interface.

5. TECHNOLOGIES USED

- Frontend: Add the programming languages and tools actually used.
- Backend: Add the backend technology, if applicable.
- Database: Add the database used, if applicable.
- Development Tools: GitHub and any other tools used by the team.

6. HOW TO RUN THE PROJECT

1. Download or clone the TaskMate repository from GitHub.
2. Open the project folder on your computer.
3. Install any required software or dependencies.
4. Follow the instructions for the programming language or framework used.
5. Run the application using the appropriate command or method.
6. Open the application and test the available features.

Note: Update these instructions according to the actual technology and project files.

7. TEAM MEMBERS AND RESPONSIBILITIES

- Member 1: Introduction, objectives, project scope, and documentation.
- Member 2: Requirements and user stories.
- Member 3: System design, workflow, and wireframes.
- Member 4: Working model or prototype and presentation.
- Member 5: Testing and test results.
- Member 6: Integration, documentation review, and final submission.

8. PROJECT STATUS

TaskMate is currently under development. The team is working on project documentation, requirements, system design, the working model or prototype, testing, and the final presentation. Update this section to reflect the actual progress and completion status of the project.
